

**Prosodic complexity in the non-word
repetition task:
Language assessment of Serbian typically
developing and children with SLI**

Maša Popović¹, Maja Savić^{1,2}, Ana Batas², Darinka Anđelković¹

Background

- ▶ Specific Language Impairment (SLI)
- ▶ Non-word Repetition Task (NRT)
- ▶ Language assessment in Serbian

Research Aims

- ▶ Phonological repetition ability of TD and SLI Serbian children
- ▶ Phonological development assessment and discrimination of SLI in Serbian (and potentially other speech-language disorders)

Participants

- ▶ Sixty 4 to 7-year-old TD children (n=15 per age group)
- ▶ Forty-two 4 to 7-year-old children with SLI (n=9-11 per age group)

Non-word repetition task in Serbian

- ▶ 48 non-words
- ▶ Savić, Anđelković, Buđevac & van der Lely, 2010
- ▶ (TOPhS, van der Lely & Harris, 1999)

- ▶ Systematic varying of phonological parameters on 4 basic non-words

Non-words

Situation	Number of syllables	Syllable structure	Non-word			
1	2	CV	<u>p</u> aba	<u>k</u> obo	g <u>o</u> ki	<u>s</u> uga
2		CCV	<u>pr</u> aba	<u>kl</u> obo	g <u>lo</u> ki	<u>sp</u> uga
3		CVC	<u>pa</u> lba	<u>ko</u> mbo	g <u>on</u> ki	<u>su</u> nga
4		CCVC	<u>pra</u> lba	<u>klom</u> bo	g <u>lon</u> ki	<u>spun</u> ga
5	3	CV	<u>pa</u> bada	<u>vu</u> kobo	g <u>o</u> kibe	<u>ki</u> suga
6		CCV	<u>pra</u> bada	<u>vu</u> klobo	g <u>lo</u> kibe	<u>ki</u> spuga
7		CVC	<u>pa</u> l ba da	<u>vu</u> kombo	g <u>on</u> kibe	<u>ki</u> su ng a
8		CCVC	<u>pra</u> l ba da	<u>vu</u> klombo	g <u>lon</u> kibe	<u>ki</u> sp un ga
9	4	CV	<u>pa</u> ba da ga	<u>vu</u> koboda	g <u>o</u> ki vu be	<u>ki</u> su ga be
10		CCV	<u>pra</u> ba da ga	<u>vu</u> kl o da	g <u>lo</u> ki vu be	<u>ki</u> sp u ga be
11		CVC	<u>pa</u> l ba da ga	<u>vu</u> ko mb oda	g <u>on</u> ki vu be	<u>ki</u> su ng a be
12		CCVC	<u>pra</u> l ba da ga	<u>vu</u> kl om oda	g <u>lon</u> ki vu be	<u>ki</u> sp un ga be

Procedure

- ▶ Non-word repetition
- ▶ Audio recording
- ▶ Transcription
- ▶ Coding

pralbadaga – tralbagada
pabaldagan
pabraga

- ▶ Statistical analysis

Results

Percentage of incorrect nonword repetitions on the task for TD and SLI children by age

Group: $F(1,94)=155.06, p<.001$

Age: $F(3,94)=18.64, p<.001$

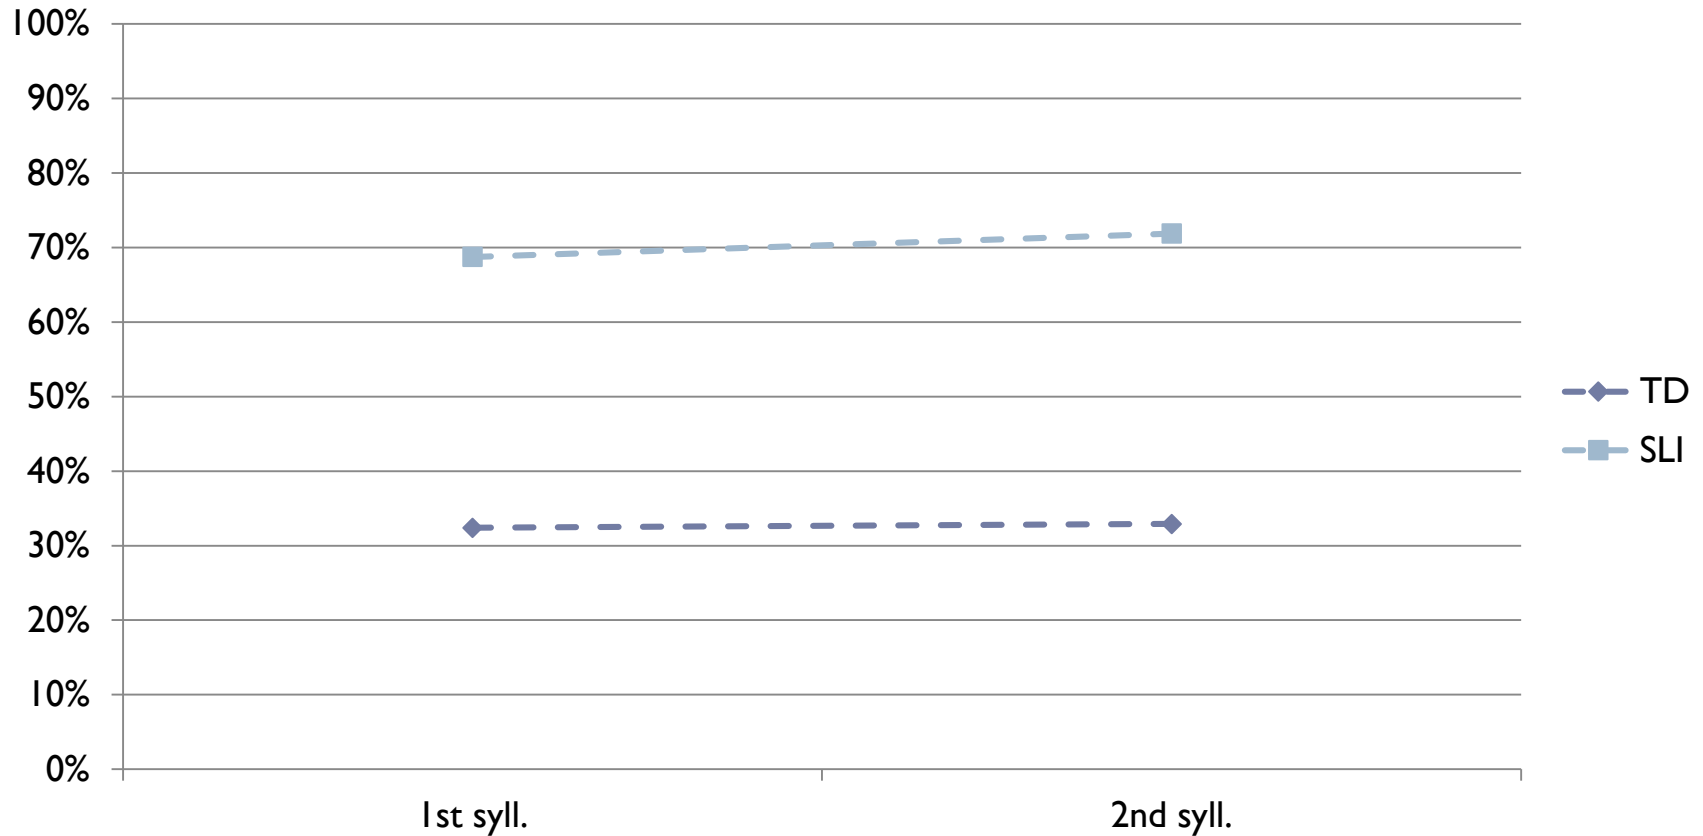

Percentage of incorrect nonword repetitions on the task for TD and SLI children by age

SLI 5y - TD 3y non sig.
SLI 6y - TD 3y non sig.
SLI 7y - TD 4y non sig.
SLI 8y - TD 5y non sig.

Percentage of incorrect repetitions of nonwords with first and with second stressed syllable for TD and SLI groups of children

Group: $F(1,100)=93.73, p<.001$

Percentage of incorrect repetitions of 2-, 3-, and 4-syllable nonwords for TD and SLI groups of children

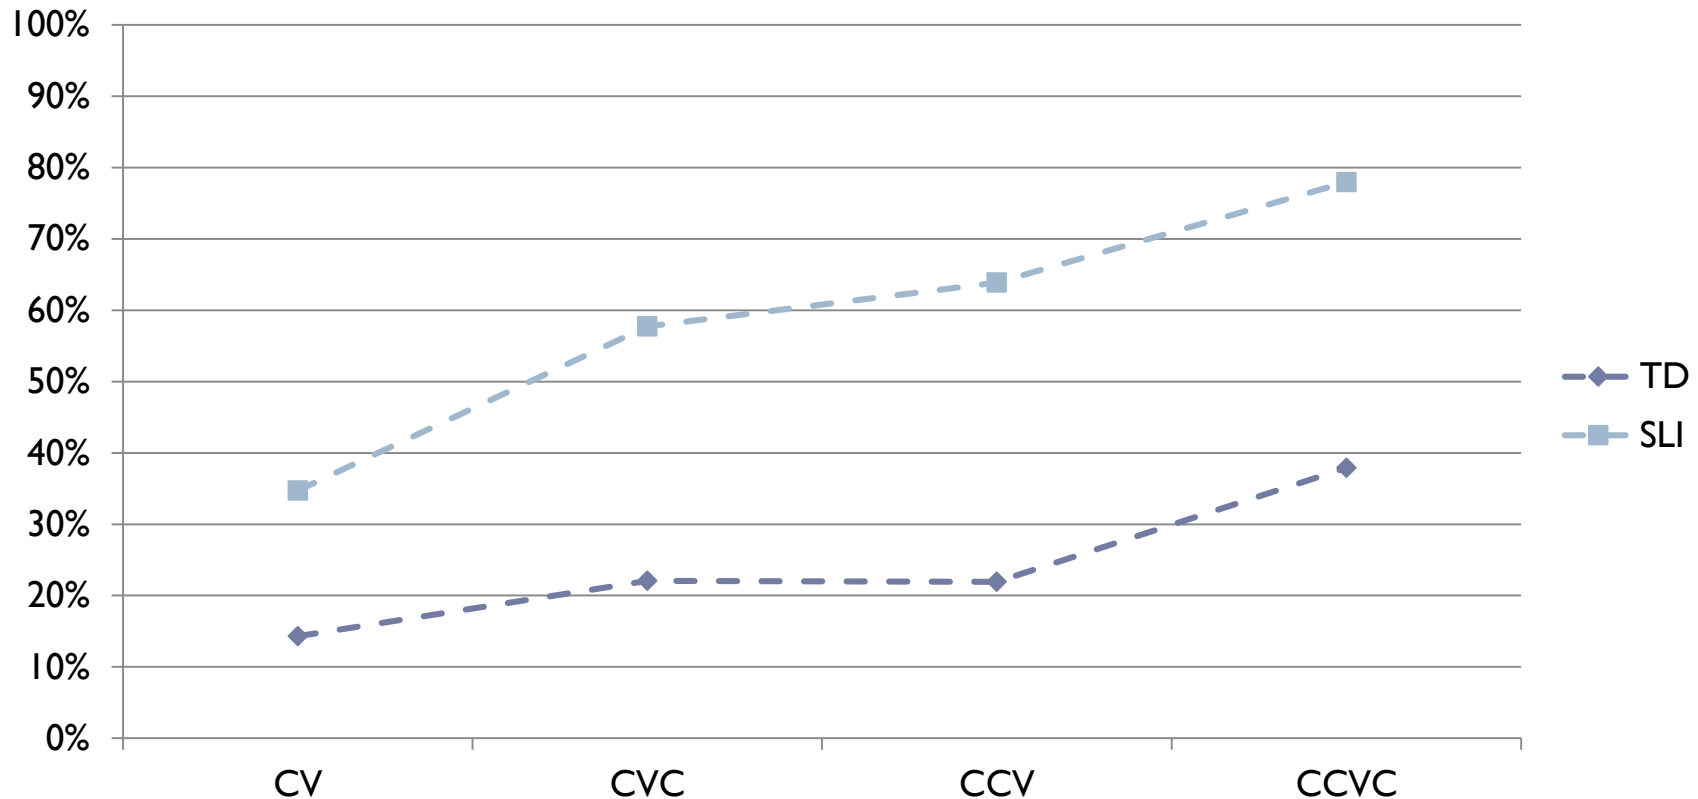

Group: $F(1,100)=98.57, p<.001$

N of Syllables: $F(2,200)=275.31, p<.001$

Group * N of Syllables: $F(2,200)=5.33, p=.006$

Percentage of incorrect repetitions of nonwords with CV, CVC, CCV, and CCVC syllable structure for TD and SLI groups of children

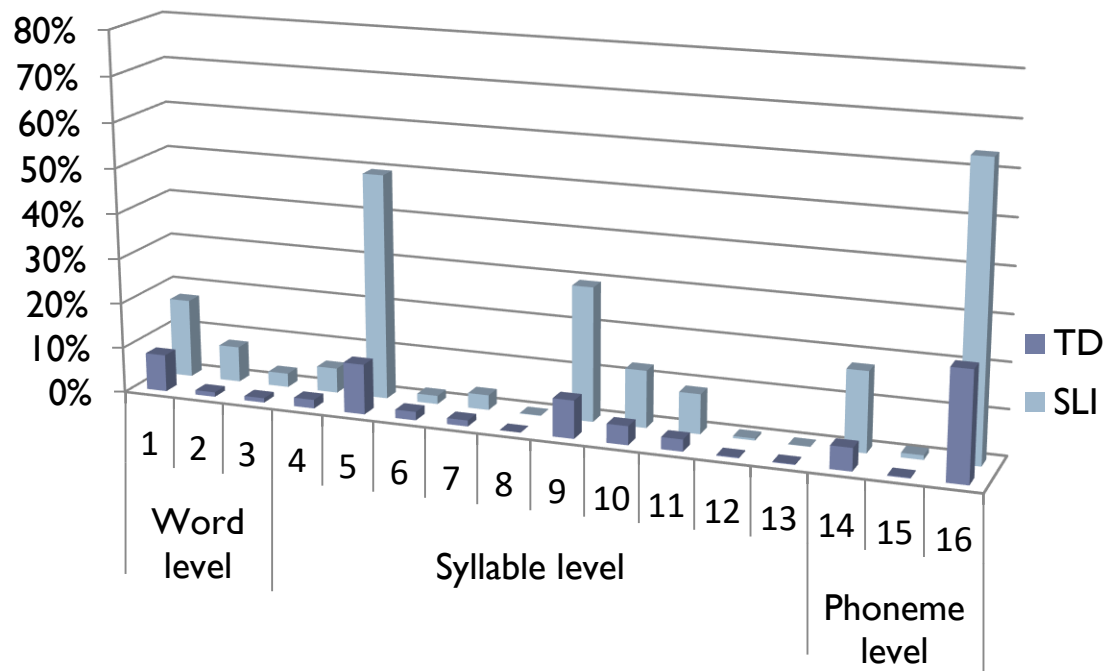

Group: $F(1,100)=98.57, p<.001$

Syll. Structure: $F(3,300)=122.99, p<.001$

Group * Syll. Structure: $F(3,300)=15.61, p<.001$

Percentage of nonword repetitions on the task containing a certain type of error on the word, syllable and phoneme level for TD and SLI groups of children

- 1 - Stress shifting (vukombo – vukombo)
- 2 - Syllable omission (gokivube – gokibe)
- 3 - Syllable addition (paba – pabala)
- 4 - Onset consonant/cons. cluster omission (kisuga – isuga, glokibe – okibe)
- 5 - Onset consonant cluster reduction (praba – paba)
- 6 - Onset consonant cluster addition (vuklobo – vluklobo)
- 7 - Onset consonant cluster translocation (glokivube – goklivube)
- 8 - Onset consonant cluster branching (spuga – spfuga)
- 9 - Coda cons. omission (gonkibe – gokibe)
- 10 - Coda cons. addition (vukobo – vukoboj)
- 11 - Coda consonant translocation (palbadaga – pabadalga)
- 12 - Coda branching (kispuga – kispugang)
- 13 - Vowel omission without syllable loss (praba – prba)
- 14 - Consonant metathesis (glonkivube – glonkibuve)
- 15 - Vowel metathesis (kisugabe – kusigabe)
- 16 - Phoneme substitution (vukombo – vukonvo)

Group: $F(16,85)=12.22, p<.001$

Conclusion

- ▶ The ability of phonological repetition significantly increases with age in TD and SLI children
- ▶ Children with SLI are significantly less successful on the task compared to their TD peers
- ▶ Children with SLI have more trouble repeating non-words of all prosodic structures compared to their TD peers
- ▶ Children with SLI make the same types of errors in repetitions as younger TD children, but there are certain differences
- ▶ The NRT constructed by systematically varying different phonological parameters in accordance with the characteristics of the Serbian language is both age and group discriminative

Further research

- ▶ Construction, standardization and adaptation of the test
- ▶ Large database – further analyses
- ▶ Testing other vulnerable language populations

Thank you for your attention!
